Question

The function f is defined by $f(x) = -3x + 60$. What is the value of $f(x)$ when $x = -8$?

Answer

A. 49

B. 52

C. 57

D. 84

Correct Answer: D

Rationale

Choice D is correct. The value of $f(x)$ when $x = -8$ can be found by substituting -8 for x in the given function. This yields $f(-8) = -3(-8) + 60$, or $f(-8) = 84$. Therefore, when $x = -8$, the value of $f(x)$ is 84.

Choice A is incorrect. This is the value of $(-3 + (-8)) + 60$, not $-3(-8) + 60$.

Choice B is incorrect. This is the value of $-8 + 60$, not $-3(-8) + 60$.

Choice C is incorrect. This is the value of $-3 + 60$, not $-3(-8) + 60$.
