Question

A special camera is used for underwater ocean research. The camera is at a depth of 39 fathoms. What is the camera's depth in feet?
$(1 \text{ fathom} = 6 \text{ feet})$

Answer

A. 234

B. 117

C. 45

D. 7

Correct Answer: A

Rationale

Choice A is correct. It’s given that a special camera is used for underwater ocean research, and this camera is at a depth of 39 fathoms. It's also given that 1 fathom is equal to 6 feet. Thus, 39 fathoms is equivalent to $(39 \text{ fathoms})\left(\frac{6 \text{ feet}}{1 \text{ fathom}}\right)$, or 234 feet. Therefore, the camera's depth, in feet, is 234.

Choice B is incorrect. This is the camera's depth, in feet, if the camera is at a depth of 19.5 fathoms.

Choice C is incorrect. This is the camera's depth, in feet, if the camera is at a depth of 7.5 fathoms.

Choice D is incorrect and may result from conceptual or calculation errors.
