Question
 $(2x + 3) - (x - 7)$

Which of the following is equivalent to the given expression?

- Answer
- A. $x - 4$
 - B. $3x - 4$
 - C. $x + 10$
 - D. $2x^2 + 21$

Correct Answer: C

Rationale
Choice C is correct. Distributing the negative sign to the terms in the second parentheses yields $(2x + 3) - x + 7$. This expression can be rewritten as $2x - x + 3 + 7$. Combining like terms results in $x + 10$.

Choice A is incorrect and may result from not distributing the negative sign to the 7. Choice B is incorrect and may result from adding $(x - 7)$ to $2x + 3$ instead of subtracting $(x - 7)$. Choice D is incorrect and may result from adding the product of $2x$ and x to the product of 3 and 7.
