

Question ID: 07bcecac

Question

$$P(t) = 24.8(1.036)^t$$

The function P gives the predicted population, in millions, of a certain country for the period from **1984** to **2018**, where t is the number of years after **1984**. According to the model, what is the best interpretation of the statement “ $P(8)$ is approximately equal to **32.91**”?

Answer

- A. In **1984**, the predicted population of this country was approximately **8** million.
- B. In **1984**, the predicted population of this country was approximately **32.91** million.
- C. **8** years after **1984**, the predicted population of this country was approximately **32.91** million.
- D. **32.91** years after **1984**, the predicted population of this country was approximately **8** million.
