Question

The function f is defined by $f(x) = 6 + \sqrt{x}$. What is the value of $f(36)$?

Correct Answer: 12

Rationale

The correct answer is **12**. The value of $f(36)$ is the value of $f(x)$ when $x = 36$. Substituting **36** for x in the given equation yields $f(36) = 6 + \sqrt{36}$, which is equivalent to $f(36) = 6 + 6$, or $f(36) = 12$. Thus, the value of $f(36)$ is **12**.
