Question

The  $y$ -intercept of the graph of  $y = x^2 + 31$  in the  $xy$ -plane is  $(0, y)$ . What is the value of  $y$ ?

Correct Answer: 31

Rationale

The correct answer is **31**. It's given that the  $y$ -intercept of the graph of  $y = x^2 + 31$  in the  $xy$ -plane is  $(0, y)$ . Substituting **0** for  $x$  in the given equation yields  $y = (0)^2 + 31$ , or  $y = 31$ . Thus, the value of  $y$  is **31**.
