Question

The graph of the polynomial function f , where $y = f(x)$, is shown. The y -intercept of the graph is $(0, y)$. What is the value of y ?

Correct Answer: 4

Rationale

The correct answer is 4. The y -intercept of the graph of a function in the xy -plane is the point where the graph intersects the y -axis. The graph of the polynomial function shown intersects the y -axis at the point $(0, 4)$. It's given that the y -intercept of the graph is $(0, y)$. Therefore, the value of y is 4.
