

Question ID: 9da41c80

Question

A ball is dropped from an initial height of **22** feet and bounces off the ground repeatedly. The function **h** estimates that the maximum height reached after each time the ball hits the ground is **85%** of the maximum height reached after the previous time the ball hit the ground. Which equation defines **h** , where **$h(n)$** is the estimated maximum height of the ball after it has hit the ground **n** times and **n** is a whole number greater than **1** and less than **10**?

Answer

A. $h(n) = 22(0.22)^n$

B. $h(n) = 22(0.85)^n$

C. $h(n) = 85(0.22)^n$

D. $h(n) = 85(0.85)^n$
