

Question ID: cfff8f8e

Question

At the time of posting a video, a social media channel had **53** subscribers. Each day for five days after the video was posted, the number of subscribers doubled from the number the previous day. Which equation gives the total number of subscribers, ***n***, to the channel ***d*** days after the video was posted?

Answer

A. $n = (53)^d$

B. $n = 53(2)^d$

C. $n = 53\left(\frac{1}{2}\right)^d$

D. $n = (53)^2 + d$
