Question

A model predicts that the population of Bergen was **15,000** in **2005**. The model also predicts that each year for the next **5** years, the population p increased by **4%** of the previous year's population. Which equation best represents this model, where x is the number of years after **2005**, for $x \leq 5$?

Answer

A. $p = 0.96(15,000)^x$

B. $p = 1.04(15,000)^x$

C. $p = 15,000(0.96)^x$

D. $p = 15,000(1.04)^x$
