Question

The function f is defined by $f(x) = 8x^3 + 4$. What is the value of $f(2)$?

Correct Answer: 68

Rationale

The correct answer is 68. It's given that the function f is defined by $f(x) = 8x^3 + 4$. Substituting 2 for x in this equation yields $f(2) = 8(2)^3 + 4$, or $f(2) = 8(8) + 4$, which is equivalent to $f(2) = 68$. Therefore, the value of $f(2)$ is 68.
