

Question ID: 263f9937

Question
Growth of a Culture of Bacteria

Day	Number of bacteria per milliliter at end of day
1	2.5×10^5
2	5.0×10^5
3	1.0×10^6

A culture of bacteria is growing at an exponential rate, as shown in the table above. At this rate, on which day would the number of bacteria per milliliter reach 5.12×10^8 ?

- Answer
- A. Day 5
 - B. Day 9
 - C. Day 11
 - D. Day 12
