Question

$$y = 576^{(2x+2)}$$

The graph of the given equation in the xy -plane has a y -intercept of (r, s) . Which of the following equivalent equations displays the value of s as a constant, a coefficient, or the base?

Answer

A. $y = 331,776^{(x+1)}$

B. $y = 24^{(4x+4)}$

C. $y = \frac{1}{24}(24)^{(4x+5)}$

D. $y = \frac{1}{576}(576)^{(2x+3)}$
