Question

Nasir bought **9** storage bins that were each the same price. He used a coupon for **\$63** off the entire purchase. The cost for the entire purchase after using the coupon was **\$27**. What was the original price, in dollars, for **1** storage bin?

Correct Answer: 10

Rationale

The correct answer is **10**. It's given that the cost for the entire purchase was **\$27** after a coupon was used for **\$63** off the entire purchase. Adding the amount of the coupon to the purchase price yields **$27 + 63 = 90$** . Thus, the cost for the entire purchase before using the coupon was **\$90**. It's given that Nasir bought **9** storage bins. The original price for **1** storage bin can be found by dividing the total cost by **9**. Therefore, the original price, in dollars, for **1** storage bin is **$\frac{90}{9}$** , or **10**.
