

Question ID: 820ad8e8

Question

In a chess tournament, each participant earns **1** point for each game the participant plays that ends in a draw and **3** points for each game the participant wins. A certain participant in this tournament has earned **41** points. Which equation represents this situation, where ***d*** represents the number of games this participant has played that ended in a draw and ***w*** represents the number of games this participant has won?

Answer

A. $d + 3w = 41$

B. $3d + w = 41$

C. $d + \frac{w}{3} = 41$

D. $\frac{d}{3} + w = 41$
