

Question ID: d1042cf8

Question

A food truck buys forks for ~~\$0.04~~ each and plates for ~~\$0.48~~ each. The total cost of x forks and y plates is ~~\$661.76~~. Which equation represents this situation?

Answer

A. $0.48x - 0.04y = 661.76$

B. $0.04x - 0.48y = 661.76$

C. $0.48x + 0.04y = 661.76$

D. $0.04x + 0.48y = 661.76$
