Question

The function  $g$  is defined by  $g(x) = 6x$ . For what value of  $x$  is  $g(x) = 54$ ?

Correct Answer: 9

Rationale

The correct answer is 9. It's given that  $g(x) = 6x$ . Substituting 54 for  $g(x)$  in the given function yields  $54 = 6x$ . Dividing both sides of this equation by 6 yields  $x = 9$ . Therefore, the value of  $x$  when  $g(x) = 54$  is 9.
