Question

Gabriella deposits **\$35** in a savings account at the end of each week. At the beginning of the **1st** week of a year there was **\$600** in that savings account. How much money, in dollars, will be in the account at the end of the **4th** week of that year?

Answer

- A. **460**
- B. **635**
- C. **639**
- D. **740**

Correct Answer: D

Rationale

Choice D is correct. It’s given that at the beginning of the **1st** week of the year there was **\$600** in a savings account and Gabriella deposits **\$35** in that savings account at the end of each week. Therefore, the amount of money, in dollars, in the savings account at the end of the **4th** week of that year is **$600 + 4(35)$** , or **740**.

Choice A is incorrect. This is the amount of money, in dollars, that will be in the account at the end of the **4th** week if Gabriella withdraws, rather than deposits, **\$35** at the end of each week.

Choice B is incorrect. This is the amount of money, in dollars, that will be in the account at the end of the **1st** week, not the **4th** week.

Choice C is incorrect and may result from conceptual or calculation errors.
