Question

The function f is defined by $f(x) = 9(2x + 3)$. For what value of x does $f(x) = 63$?

Answer

- A. 2
- B. 5
- C. 7
- D. 30

Correct Answer: A

Rationale

Choice A is correct. Substituting 63 for $f(x)$ in the given function yields $63 = 9(2x + 3)$. Dividing both sides of this equation by 9 yields $7 = 2x + 3$. Subtracting 3 from both sides of this equation yields $4 = 2x$. Dividing both sides of this equation by 2 yields $2 = x$. Therefore, $f(x) = 63$ when the value of x is 2.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect and may result from conceptual or calculation errors.
