Question

The cost y , in dollars, for a manufacturer to make x rings is represented by the line shown.

What is the cost, in dollars, for the manufacturer to make **60** rings?

Answer

- A. 100
- B. 125
- C. 175
- D. 225

Correct Answer: C

Rationale

Choice C is correct. The line shown represents the cost y , in dollars, for a manufacturer to make x rings. For the line shown, the x -axis represents the number of rings made by the manufacturer and the y -axis represents the cost, in dollars. Therefore, the cost, in dollars, for the manufacturer to make **60** rings is represented by the y -coordinate of the point on the line that has an x -coordinate of **60**. The point on the line with an x -coordinate of **60** has a y -coordinate of **175**. Therefore, the cost, in dollars, for the manufacturer to make **60** rings is **175**.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice B is incorrect. This is the cost, in dollars, for the manufacturer to make **20** rings.

Choice D is incorrect. This is the cost, in dollars, for the manufacturer to make **100** rings.
