Question

Sean rents a tent at a cost of **\$11** per day plus a onetime insurance fee of **\$10**. Which equation represents the total cost c , in dollars, to rent the tent with insurance for d days?

Answer

- A. $c = 11(d + 10)$
- B. $c = 10(d + 11)$
- C. $c = 11d + 10$
- D. $c = 10d + 11$

Correct Answer: C

Rationale

Choice C is correct. It’s given that the cost of renting a tent is **\$11** per day for d days. Multiplying the rental cost by the number of days yields **\$11 d** , which represents the cost of renting the tent for d days before the insurance is added. Adding the onetime insurance fee of **\$10** to the rental cost of **\$11 d** gives the total cost c , in dollars, which can be represented by the equation $c = 11d + 10$.

Choice A is incorrect. This equation represents the total cost to rent the tent if the insurance fee was charged every day.

Choice B is incorrect. This equation represents the total cost to rent the tent if the daily fee was **\$($d + 11$)** for **10** days.

Choice D is incorrect. This equation represents the total cost to rent the tent if the daily fee was **\$10** and the onetime fee was **\$11**.
