Question

Argon is placed inside a container with a constant volume. The graph shows the estimated pressure y , in **pounds per square inch (psi)**, of the argon when its temperature is x kelvins.

What is the estimated pressure of the argon, in **psi**, when the temperature is **600** kelvins?

- Answer**
- A. 6
 - B. 12
 - C. 300
 - D. 600

Correct Answer: B

Rationale

Choice B is correct. For the graph shown, the x -axis represents temperature, in kelvins, and the y -axis represents the estimated pressure, in **pounds per square inch (psi)**. The estimated pressure of the argon when the temperature is **600** kelvins can be found by locating the point on the graph where the value of x is equal to **600**. The graph passes through the point **(600, 12)**. This means that when the temperature is **600** kelvins, the estimated pressure is **12 psi**.

Choice A is incorrect. This is the estimated pressure, in **psi**, of the argon when the temperature is **300** kelvins, not **600** kelvins.

Choice C is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect. This is the temperature, in kelvins, of the argon.
