

Question ID: 2f34cd1c

Question

The function $f(x) = 55.20 - 0.16x$ gives the estimated surface water temperature $f(x)$, in degrees Celsius, of a body of water on the x th day of the year, where $220 \leq x \leq 360$. Based on the model, what is the estimated surface water temperature, in degrees Celsius, of this body of water on the 326th day of the year?

Answer

- A. 55.20
- B. 3.04
- C. -0.16
- D. -52.16
