

Question ID: 56dc8045

Question

$$w(t) = 300 - 4t$$

The function w models the volume of liquid, in milliliters, in a container t seconds after it begins draining from a hole at the bottom. According to the model, what is the predicted volume, in milliliters, draining from the container each second?

Answer

- A. 300
- B. 296
- C. 75
- D. 4
