Question

For a party, **50** dinner rolls are needed. Dinner rolls are sold in packages of **12**. What is the minimum number of packages that should be bought for the party?

Correct Answer: 5

Rationale

The correct answer is **5**. Let **p** represent the number of packages of dinner rolls that should be bought for the party. It's given that dinner rolls are sold in packages of **12**. Therefore, **$12p$** represents the number of dinner rolls that should be bought for the party. It's also given that **50** dinner rolls are needed; therefore, **$12p \geq 50$** . Dividing both sides of this inequality by **12** yields **$p \geq \frac{50}{12}$** , or approximately **$p \geq 4.17$** . Since the number of packages of dinner rolls must be a whole number, the minimum number of packages that should be bought for the party is **5**.
