Question

What is the area, in square inches, of a rectangle with a length of **7** inches and a width of **6** inches?

Answer

- A. **13**
- B. **20**
- C. **42**
- D. **84**

Correct Answer: C

Rationale

Choice C is correct. The area, ***A***, of a rectangle is given by the formula ***A = ℓw***, where ***ℓ*** represents the length of the rectangle and ***w*** represents its width. It’s given that the rectangle has a length of **7** inches and a width of **6** inches. Substituting **7** for ***ℓ*** and **6** for ***w*** in the formula ***A = ℓw*** yields ***A = (7)(6)***, or ***A = 42***. Thus, the area, in square inches, of the rectangle is **42**.

Choice A is incorrect. This is the sum, not the product, of the length and width of the rectangle.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect. This is twice the area, in square inches, of the rectangle.
