Question

The width of a rectangle is **7** centimeters. The length of the rectangle is **40** centimeters longer than the width. What is the area, in square centimeters, of this rectangle?

Answer

- A. **7**
- B. **14**
- C. **54**
- D. **329**

Correct Answer: D

Rationale

Choice D is correct. It’s given that the width of this rectangle is **7** centimeters and that the length of this rectangle is **40** centimeters longer than the width. Therefore, the length of this rectangle is **7 + 40**, or **47**, centimeters. The area of a rectangle can be found by multiplying its length and its width. Therefore the area, in square centimeters, of this rectangle is **(7)(47)**, or **329**.

Choice A is incorrect. This is the width, in centimeters, not the area, in square centimeters, of this rectangle.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.
