Question

Triangle R has an area of **80 square centimeters (cm^2)**. Square S has side lengths of **4 cm**. What is the total area of triangle R and square S, in cm^2 ?

Answer

- A. **42**
- B. **44**
- C. **84**
- D. **96**

Correct Answer: D

Rationale

Choice D is correct. It’s given that triangle R has an area of **80 cm^2** . The area of a square is ℓ^2 , where ℓ is the side length of the square. It’s given that square S has side lengths of **4 cm**. It follows that the area, in cm^2 , of square S is **4²**, or **16**. Therefore, the total area, in cm^2 , of triangle R and square S is **80 + 16**, or **96**.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice B is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.
