Question

A triangle has a base length of **40** centimeters and a height of **90** centimeters. What is the area, in square centimeters, of the triangle?

Correct Answer: 1800

Rationale

The correct answer is **1,800**. The area, ***A***, of a triangle can be found using the formula **$A = \frac{1}{2}bh$** , where ***b*** is the base length of the triangle and ***h*** is the height of the triangle. It's given that the triangle has a base length of **40** centimeters and a height of **90** centimeters. Substituting **40** for ***b*** and **90** for ***h*** in the formula **$A = \frac{1}{2}bh$** yields **$A = \frac{1}{2}(40)(90)$** , or **$A = 1,800$** . Therefore, the area, in square centimeters, of the triangle is **1,800**.
