Question

An angle has a measure of  $\frac{16\pi}{15}$  radians. What is the measure of the angle, in degrees?

Correct Answer: 192

Rationale

The correct answer is **192**. The measure of an angle, in degrees, can be found by multiplying its measure, in radians, by  $\frac{180 \text{ degrees}}{\pi \text{ radians}}$ . Multiplying the given angle measure,  $\frac{16\pi}{15}$  **radians**, by  $\frac{180 \text{ degrees}}{\pi \text{ radians}}$  yields  $\left(\frac{16\pi}{15} \text{ radians}\right)\left(\frac{180 \text{ degrees}}{\pi \text{ radians}}\right)$ , which simplifies to **192** degrees.
