Question

The equation $(x + 6)^2 + (y + 3)^2 = 121$ defines a circle in the xy-plane. What is the radius of the circle?

Rationale

The correct answer is 11. A circle with equation $(x - a)^2 + (y - b)^2 = r^2$, where a, b, and r are constants, has center (a,b) and radius r.

Therefore, the radius of the given circle is $\sqrt{121}$, or 11.
