Question

Note: Figure not drawn to scale.

In the figure, line *j* is parallel to line *k*. What is the value of *x*?

Correct Answer: 47

Rationale

The correct answer is **47**. Based on the figure, the angle with measure ***x*°** and the angle with measure **133°** together form a straight line. Therefore, these two angles are supplementary, so the sum of their measures is **180°**. It follows that ***x* + 133 = 180**. Subtracting **133** from both sides of this equation yields ***x* = 47**.
