Question

In a right triangle, the measure of one of the acute angles is **51°**. What is the measure, in degrees, of the other acute angle?

Answer

- A. **6**
- B. **39**
- C. **49**
- D. **51**

Correct Answer: B

Rationale

Choice B is correct. The sum of the measures of the interior angles of a triangle is **180** degrees. Since the triangle is a right triangle, it has one angle that measures **90** degrees. Therefore, the sum of the measures, in degrees, of the remaining two angles is **180 — 90**, or **90**. It’s given that the measure of one of the acute angles in the triangle is **51** degrees. Therefore, the measure, in degrees, of the other acute angle is **90 — 51**, or **39**.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice C is incorrect and may result from conceptual or calculation errors.

Choice D is incorrect. This is the measure, in degrees, of the acute angle whose measure is given.
