

Question ID: f04d40b2

Question

From a population of **50,000** people, **1,000** were chosen at random and surveyed about a proposed piece of legislation. Based on the survey, it is estimated that **35%** of people in the population support the legislation, with an associated margin of error of **3%**. Based on these results, which of the following is a plausible value for the total number of people in the population who support the proposed legislation?

Answer

- A. **350**
- B. **650**
- C. **16,750**
- D. **31,750**
