Question

Data value	Frequency
6	3
7	3
8	8
9	8
10	9
11	11
12	9
13	0
14	6

The frequency table summarizes the **57** data values in a data set. What is the maximum data value in the data set?

Correct Answer: 14

Rationale

The correct answer is **14**. The maximum value is the largest value in the data set. The frequency refers to the number of times a data value occurs. The given frequency table shows that for this data set, the data value **6** occurs three times, the data value **7** occurs three times, the data value **8** occurs eight times, the data value **9** occurs eight times, the data value **10** occurs nine times, the data value **11** occurs eleven times, the data value **12** occurs nine times, the data value **13** occurs zero times, and the data value **14** occurs six times. Therefore, the maximum data value in the data set is **14**.
