Question

23, 27, 27, 32, 35, 36, 52

What is the range of the 7 scores shown?

Correct Answer: 29

Rationale

The correct answer is **29**. The range of a data set is the difference between its maximum value and its minimum value. For the data set shown, the maximum score is **52** and the minimum score is **23**. The difference between those scores is **52 — 23**, or **29**. Therefore, the range of the **7** scores shown is **29**.
