Question

There are **250** trees in a park. Of these trees, **6%** are birch trees. How many birch trees are in the park?

Answer

- A. **6**
- B. **15**
- C. **75**
- D. **244**

Correct Answer: B

Rationale

Choice B is correct. It's given that there are **250** trees in a park and of these trees, **6%** are birch trees. The number of birch trees in the park can be calculated by multiplying the number of trees in the park by $\frac{6}{100}$. Therefore, the number of birch trees in the park is **250**($\frac{6}{100}$), or **15**.

Choice A is incorrect. This is the percentage of trees in the park that are birch trees, not the number of birch trees in the park.

Choice C is incorrect. This is **30%**, not **6%**, of **250**.

Choice D is incorrect and may result from conceptual or calculation errors.
