Question

Lani spent 15% of her 8-hour workday in meetings. How many minutes of her workday did she spend in meetings?

Answer

- A. 1.2
- B. 15
- C. 48
- D. 72

Correct Answer: D

Rationale

Choice D is correct. There are 60 minutes in one hour, so an 8-hour workday has  $(60)(8) = 480$  minutes. To calculate 15% of 480, multiply 0.15 by 480:  $(0.15)(480) = 72$ . Therefore, Lani spent 72 minutes of her workday in meetings.

Choice A is incorrect because 1.2 is 15% of 8, which gives the time Lani spent of her workday in meetings in hours, not minutes. Choices B and C are incorrect and may be the result of computation errors.
