Question

The value of z is **1.13** times **100**. The value of z is what percent greater than **100**?

Answer

- A. **11.3**
- B. **13**
- C. **130**
- D. **213**

Correct Answer: B

Rationale

Choice B is correct. It’s given that the value of z is **1.13** times **100**. This can be written as $z = (1.13)(100)$, which is equivalent to $z = (1 + 0.13)(100)$, or $z = (1 + \frac{13}{100})(100)$. It follows that the value of z is **100%** of **100** plus **13%** of **100**. Therefore, the value of z is **13%** greater than **100**.

Choice A is incorrect. This gives a value of z that is **1.113**, not **1.13**, times **100**.

Choice C is incorrect. This gives a value of z that is **2.30**, not **1.13**, times **100**.

Choice D is incorrect. This gives a value of z that is **3.13**, not **1.13**, times **100**.
