Question

A reseller buys certain books for a purchase price of **5.00** dollars each and then marks them each for sale at a consumer price that is **270%** of the purchase price. After **4** months, any remaining books not yet sold are marked at a discounted price that is **70%** off the consumer price. What is the discounted price of each of the remaining books, in dollars?

Correct Answer: 4.05, 81/20

Rationale

The correct answer is **4.05**. It's given that the purchase price for certain books is **5.00** dollars each. It's also given that each book is marked for sale at a consumer price that is **270%** of the purchase price. Since the consumer price is **270%** of the purchase price of **5.00** dollars, it follows that the consumer price is **(2.7)(5.00)**, or **13.50**, dollars. It's given that after **4** months, any remaining books are discounted at **70%** off the consumer price. Thus, the discount amount is **(0.7)(13.50)**, or **9.45**, dollars. Subtracting the discount amount from the consumer price gives the discounted price of each of the remaining books: **13.50 — 9.45 = 4.05**. Note that 4.05 and 81/20 are examples of ways to enter a correct answer.
