Question

Each face of a fair **14**-sided die is labeled with a number from **1** through **14**, with a different number appearing on each face. If the die is rolled one time, what is the probability of rolling a **2**?

Answer

- A. $\frac{1}{14}$
- B. $\frac{2}{14}$
- C. $\frac{12}{14}$
- D. $\frac{13}{14}$

Correct Answer: A

Rationale

Choice A is correct. The total number of possible outcomes for rolling a fair **14**-sided die is **14**. The number of possible outcomes for rolling a **2** is **1**. The probability of rolling a **2** is the number of possible outcomes for rolling a **2** divided by the total number of possible outcomes, or $\frac{1}{14}$.

Choice B is incorrect. This is the probability of rolling a number no greater than **2**.

Choice C is incorrect. This is the probability of rolling a number greater than **2**.

Choice D is incorrect. This is the probability of rolling a number other than **2**.
