Question

A certain bird species can fly at an average speed of **16** meters per second when in continuous flight. At this rate, how many meters would this bird species fly in **4** seconds?

Answer

- A. **64**
- B. **20**
- C. **16**
- D. **12**

Correct Answer: A

Rationale

Choice A is correct. It's given that a certain bird species can fly at an average speed of **16** meters per second when in continuous flight. At this rate, in **4** seconds this bird species would fly ($\frac{16 \text{ meters}}{\text{second}}$)(**4 seconds**), or **64** meters.

Choice B is incorrect. This is the value of **16 + 4**, not **16(4)**.

Choice C is incorrect. This is the distance the bird would fly in **1** second, not **4** seconds.

Choice D is incorrect. This is the value of **16 – 4**, not **16(4)**.
