Question

A participant in a bicycle race completes the race with an average speed of **24,816** yards per hour. What is this average speed, in miles per hour? (**1 mile = 1,760 yards**)

Correct Answer: 14.1

Rationale

The correct answer is **14.1**. It's given that a participant completes the bicycle race with an average speed of **24,816** yards per hour and **1 mile = 1,760 yards**. It follows that this average speed is equivalent to $\left(\frac{24,816 \text{ yards}}{1 \text{ hour}}\right)\left(\frac{1 \text{ mile}}{1,760 \text{ yards}}\right)$, which yields $\frac{14.1 \text{ miles}}{1 \text{ hour}}$, or **14.1** miles per hour.
