Question

A certain town has an area of **4.36** square miles. What is the area, in square yards, of this town? (**1 mile = 1,760 yards**)

Answer

- A. **404**
- B. **7,674**
- C. **710,459**
- D. **13,505,536**

Correct Answer: D

Rationale

Choice D is correct. Since the number of yards in **1** mile is **1,760**, the number of square yards in **1** square mile is  $(1,760)(1,760) = 3,097,600$ . Therefore, if the area of the town is **4.36** square miles, it is  $4.36(3,097,600) = 13,505,536$ , in square yards.

Choice A is incorrect and may result from dividing the number of yards in a mile by the square mileage of the town.

Choice B is incorrect and may result from multiplying the number of yards in a mile by the square mileage of the town.

Choice C is incorrect and may result from dividing the number of square yards in a square mile by the square mileage of the town.
