Question

The scatterplot shows the relationship between the weight, in pounds, of each of **9** female gray wolves on April **30** and the number of offspring each gray wolf produced.

How many offspring did the **50**-pound gray wolf produce?

Answer

- A. **8**
- B. **7**
- C. **6**
- D. **5**

Correct Answer: C

Rationale

Choice C is correct. For each point on the scatterplot shown, the x-value represents the weight, in pounds, of a female gray wolf and the y-value represents the number of offspring that wolf produced. The point on the graph with an x-value of **50** has a y-value of **6**. Therefore, the **50**-pound gray wolf produced **6** offspring.

Choice A is incorrect. One of the wolves produced **8** offspring, but its weight was greater than **50** pounds.

Choice B is incorrect. Three of the wolves produced **7** offspring each, but their weights were each greater than **50** pounds.

Choice D is incorrect. Two of the wolves produced **5** offspring each, but their weights were each less than **50** pounds.
