Question

The scatterplot shows the relationship between two variables, x and y . A line of best fit for the data is also shown.

For how many of the 10 data points is the actual y -value greater than the y -value predicted by the line of best fit?

Answer

- A. 3
- B. 4
- C. 6
- D. 7

Correct Answer: C

Rationale

Choice C is correct. Any data point that's located above the line of best fit has a y -value that's greater than the y -value predicted by the line of best fit. For the scatterplot shown, 6 of the data points are above the line of best fit. Therefore, 6 of the data points have an actual y -value that's greater than the y -value predicted by the line of best fit.

Choice A is incorrect and may result from conceptual or calculation errors.

Choice B is incorrect. This is the number of data points that have an actual y -value that's less than the y -value predicted by the line of best fit.

Choice D is incorrect and may result from conceptual or calculation errors.
