Question

The scatterplot shows the relationship between two variables, x and y . A line of best fit for the data is also shown.

At $x = 32$, which of the following is closest to the y -value predicted by the line of best fit?

Answer

- A. 0.4
- B. 1.5
- C. 2.4
- D. 3.3

Correct Answer: C

Rationale

Choice C is correct. At $x = 32$, the line of best fit has a y -value between 2 and 3. The only choice with a value between 2 and 3 is choice C.

Choice A is incorrect. This is the difference between the y -value predicted by the line of best fit and the actual y -value at $x = 32$ rather than the y -value predicted by the line of best fit at $x = 32$.

Choice B is incorrect. This is the y -value predicted by the line of best fit at $x = 31$ rather than at $x = 32$.

Choice D is incorrect. This is the y -value predicted by the line of best fit at $x = 33$ rather than at $x = 32$.
