Question

Catherine L. Cardelús is a researcher who studies canopy soil. Canopy soil is formed in a tree's branches (its canopy) when dead leaves and other falling things collect. This material breaks down, becoming canopy soil. Canopy soil helps preserve a healthy water cycle (how water moves through the environment) in rainforests. This benefit is one reason Cardelús is interested in the canopy soils in large choibá trees in rainforests in Costa Rica.

Which choice best describes the text's overall structure?

Answer

- A. It explains a disagreement between researchers and how it was resolved.
- B. It presents an idea and mentions a researcher who disagrees with that idea.
- C. It compares the sizes of two types of trees over several years.
- D. It introduces a researcher and gives information about what she researches.
