

Question ID: 2af2016f

Question

A study by Dr. Paul Hanel and colleagues concluded that people are more likely to behave politely when listening to ideas they disagree with if they think about values before they engage in a discussion. Study participants were assigned to one of two groups. The experimental group spent a few minutes writing about one of their personal values before they had a group discussion on a controversial topic. And the control group spent a few minutes writing about a drink (tea, milk, etc.) before their group discussion on that topic. Hanel and colleagues found that the experimental group's discussion was more civil than the control group's discussion was.

Which choice best describes the main purpose of the text?

Answer

- A. To describe a widely held belief and how a study's results support that belief
- B. To argue that researchers were surprised by the results of a certain study
- C. To suggest ways to improve a certain study's experimental design
- D. To explain a study's conclusion and how a research team arrived at that conclusion
