Question

While researching a topic, a student has taken the following notes:

- Pineapple is a fruit that contains ascorbic acid, an essential nutrient for humans.
- Every 100 grams (g) of pineapple contains 48 milligrams (mg) of ascorbic acid.
- Many animals can make ascorbic acid in their bodies, but humans cannot.
- Humans must get ascorbic acid from foods, including fruits and vegetables.
- Ascorbic acid is also known as vitamin C.

The student wants to provide an example of a fruit that contains vitamin C. Which choice most effectively uses relevant information from the notes to accomplish this goal?

Answer

- A. Humans cannot make ascorbic acid in their bodies, but they can get it from foods, such as fruits, for example.
- B. Vitamin C, also known as ascorbic acid, can be found in pineapple as well as other fruits.
- C. Since humans cannot make vitamin C in their bodies, they must get it from food.
- D. Many animals can make ascorbic acid, which is also known as vitamin C, in their bodies, but humans cannot.

Correct Answer: B

Rationale

Choice B is the best answer. The sentence provides an example of a fruit that contains vitamin C, noting that vitamin C (also known as ascorbic acid) can be found in pineapple as well as other fruits.

Choice A is incorrect. While the sentence does explain that humans can get vitamin C from fruits, it doesn't provide an example of a specific fruit that contains vitamin C. Choice C is incorrect. The sentence explains why humans must get vitamin C from foods; it doesn't provide an example of a fruit that contains vitamin C. Choice D is incorrect. The sentence compares vitamin C production in animals with vitamin C production in humans; it doesn't provide an example of a fruit that contains vitamin C.
